(B) PREVIOUS YEAR QUESTIONS

1. Select the option that shows the correctly identified 'U', 'X', 'Y' and 'Z' in a developing dicot embryo. [CBSE 2023]

   (1) X-Plumule (2n), Y-Suspensor (n), Z-Cotyledon (2n), U-Radicle (2n).
   (2) X-Plumule (2n), Y-Suspensor (2n), Z-Radicle (2n), U-Cotyledon (2n).
   (3) X-Suspensor (2n), Y-Cotyledon (2n), Z-Radicle (2n), U-Plumule (2n).
   (4) X-Cotyledon (2n), Y-Radicle (n), Z-Plumule (n), U-Suspensor (n).

2. (i) Explain the monosporic development of embryo sac in the ovule of an angiosperm.
   (ii) Draw a diagram of the mature embryo sac of an angiosperm and label any four parts in it. [CBSE 2023]

3. One of the major approaches of crop improvement programme is Artificial hybridisation. Explain the steps involved in making sure that only the desired pollen grain pollinate the stigma of a bisexual flower by a plant breeder. [CBSE 2023]

4. The hilum in a typical angiosperm ovule represents the junction between:- [CBSE Term-I 2022]
5. In the given diagram of a transverse section of a young anther. Choose the labellings showing the correct placement of the wall layers from the table given below. [CBSE Term-I 2022]

(i) Epidermis  Middle layers  Tapetum  Endothecium  
(ii) Tapetum  Endothecium  Epidermis  Middle layers  
(iii) Endothecium  Tapetum  Middle layers  Epidermis  
(iv) Middle layers  Epidermis  Endothecium  Tapetum  

6. The term used for the embryo entering into the state of inactivity as the seed mature is:- [CBSE Term-I 2022]

(1) Quiescent  (2) Parthenogenesis  (3) Parthenocarpy  (4) Dormancy

7. The ploidy of the apomictic embryo developed from the integument cells and megaspore mother cell without reduction division respectively will be:- [CBSE Term-I 2022]

(1) 2n and 2n  (2) n and n  (3) 2n and n  (4) 3n and 2n
8. Given below is a diagrammatic representation of a mature embryo sac of a plant.

[CBSE Term-I 2022]

Choose the option showing the correct labellings for the parts W, X, Y and Z from the table given below.

<table>
<thead>
<tr>
<th></th>
<th>W</th>
<th>X</th>

</table>

10. An undifferentiated sheath covering the root cap of a monocotyledonous embryo is:

   [CBSE Term-I 2022]

   (1) Scutellum  (2) Coleorhiza  (3) Coleoptile  (4) Epiblast

11. Why does endosperm development precede embryo development? [CBSE]

12. How many meiotic divisions are required to produce 76 seeds in a Guava fruit? [CBSE IMP-Question]

13. How does pollination take place in water hyacinth and water lily? [CBSE IMP-Question]

14. Self-pollination is fully ensured if [CBSE 2020]

   (1) The flower is bisexual.  (2) The style is longer than the filament.
   (3) The flower is cleistogamous.  (4) The time of pistil and anther maturity is different.

15. Draw a schematic transverse section of a mature anther of an angiosperm. Label its epidermis, middle layers, tapetum, endothecium, sporogenous tissue and the connective. [CBSE 2018,20]
16. Differentiate between the wind pollinated and insect pollinated flowers.

17. Some flowers, selected for artificial hybridization, do not require emasculation b
essential for them. Give a reason. [CBSE 2019]

18. Write any two ways by which apomictic seeds may be developed in angiosperms. [CBSE 2019]

19. Draw a labeled diagram of a mature male gametophyte of an angiosperm. [CBSE 2019]

20. Draw a diagram of L.S. of an embryo of grass and label any six parts. [CBSE 2019]

20. (a) Draw a diagram of Pistil showing pollen tube growth in angiosperm and label
(i) Stigma (ii) male gametes (iii) micropyle and (iv) Ovule.
(b) Write the function of micropyle. [CBSE 2018]

21. State one difference and one similarity between geitonogamy and xenogamy. [CBSE 2018]

22. Explain any three devices developed in flowering plants to discourage self pollination and
courage cross pollination. [CBSE 2018]

23. Write one advantage and one disadvantage of cleistogamy to flowering plants. [CBSE 2018]

24. If the meiocyte of a maize plant contains 20 chromosomes, write the number of chromosomes
in the endosperm and embryo of the maize grain and give reasons in support
of your answer. [CBSE 2018]

25. (a) Describe the process of microsporogenesis upto the formation of a microspore.

26. Write the function of 'germ pore' in a pollen grain of an angiosperm. [CBSE 2018]
PREVIOUS YEAR QUESTIONS

1. Given below are structural details of a human mammary gland: [CBSE 2023]

(i) The glandular tissue in the breast has 15-20 clusters of cells called alveoli.
(ii) The milk is stored in the lumen of alveoli.
(iii) The alveoli join to form the mammary ducts.
(iv) Mammary ampulla is connected to lactiferous ducts.

Choose the option that gives the correct detail of human mammary gland.

(1) (i) and (ii) (2) (ii) and (iii) (3) (ii) and (iv) (4) (i) and (iii)

2. The graph given below shows the number of primordial follicles per ovary in women at different ages. Study the graph and answer the questions that follow. [CBSE 2023]

(a) What is the average age of the women at the onset of menopause?
(b) At what age are maximum primordial follicles present in the ovary, according to the given graph?

3. (i) Explain the formation of placenta after the implantation in a human female.
(ii) Draw a diagram showing human foetus within the uterus and label any four parts in its. [CBSE 2023]

4. Breast-feeding the baby acts as a natural contraceptive for the mother because it prevents: [CBSE Term-I 2022]
   (i) Ovulation (ii) Menstruation (iii) Insemination (iv) Fertilisation
   (1) (ii) and (iv) (2) (i) and (iii) (3) (i) and (iv) (4) (i) and (ii)

5. The given figure shows the different stages of human embryo [CBSE Term-I 2022]

Identify the correct labelings for W, X, Y and Z and choose the correct option from the table below.

<table>
<thead>
<tr>
<th>W</th>
<th>X</th>
<th>Y</th>

<tr>
<td>Morula</td>
<td>Blastocyst</td>
<td>Cleavage</td>
<td>Fertilisation</td>
</tr>
</tbody>
</table>

(1) (2) (3) (4)

6. During human embryonic development the external genital organs are well developed in the foetus by the end of – [CBSE Term-I 2022]
   (1) 6 weeks of pregnancy (2) 12 weeks of pregnancy
   (3) 18 weeks of pregnancy (4) 24 weeks of pregnancy

7. The accessory ducts in the human male reproductive system consists of [CBSE Term – I 2022]
   (1) Epididymis, Prostate, Rete testis (2) Rete testis, Vas efferentia, Seminal vesicles
   (3) Vas efferentia, Bulbourethral, Epididymis (4) Rete testis, epididymis, Vas deferens
8. The source of gonadotropin LH and its corresponding function is:  

(1) Anterior pituitary, ovulation  
(2) Anterior pituitary, Graafian follicle formation  
(3) Hypothalamus, Ovulation  
(4) Hypothalamus, Graafian follicle formation

CASE BASED QUESTIONS

9. A women of 35 years age with a married life of eight years and having normal reproductive cycles visits a doctor along with her husband for consultation for infertility. They were not using any contraceptive methods. They have no child. The doctor advises them after a detailed physical examination of both of them to undergo following investigations:

– Seminal analysis of the husband.
– Follicular study of the wife.
– Blood test for follicle Stimulating Hormone (FSH) estimation for both

With your basic knowledge of human embryology and the case given above, answer the following questions:

(i) Seminal analysis of the husband was done for determining

(1) (i) only  (2) (i) and (ii)  (3) (ii) and (iii)  (4) (ii) only

(ii) An ultrasound – guided follicular study was done for the wife for determining the size and physical appearance of the

(1) Ovary  (2) Oogonia  (3) Antral follicles  (4) Corpus Luteum

(iii) The blood test report of the wife showed low FSH value, which is indicative of –

(1) low rate of formation of ovarian follicles  (2) high rate of formation of ovarian follicles  
(3) low rate maturation of ovarian follicles  (4) high rate of maturation of ovarian follicles

(iv) In the above case if the husband is found to have sperm count of less than 20 million/mL and the wife is diagnosed with blockage in the oviduct, the couple would be advised for:

(1) ZIFT  (2) AI  (3) IVF  (4) ICSI

(1) (i) and (iii)  (2) (ii) and (iii)  (3) (iii) and (iv)  (4) (i) and (iv)

(v) The high level of which gonadotropin/ovarian hormone in the blood sample of the wife taken on day 20 of her reproductive (menstrual) cycle would indicate the letual phase of the ovarian cycle?

(1) FSH  (2) LH  (3) Estrogens  (4) Progesterone
(vi) In which phase of the menstrual cycle is the blood sample of a women take it shows high levels of L.H. and estrogen?  [CBSE Term-I 2022]

(1) Ovulatory phase  (2) Menstrual phase  (3) Secretory phase  (4) Follicular phase

10. Name the glands that contribute to human seminal plasma.  [CBSE IMP-Question]

11. A fully developed foetus initiates its delivery from the mother’s womb. Justify the statement.  [CBSE IMP-Question]

12. Study the graph given below related with menstrual cycle in females:[CBSE IMP-Question]

a. Identify ovarian hormones X and Y mentioned in the graph and specify their source.

b. Correlate and describe the uterine events that take place according to the ovarian hormone levels X and Y mentioned in the graph on -

   i. 6 – 15 days

   ii. 16 – 25 days

   iii. 26 – 28 days (when ovum is not fertilized)

The following figure shows a foetus within the uterus. On the basis of the given figure, answer the questions that follow:  [CBSE IMP-Question]
c. In the above figure, choose and name the correct part (A, B, C or D) that act as a temporary endocrine gland and substantiate your answer. Why is it also called the functional junction?
d. Mention the role of B in the development of the embryo.
e. Name the fluid surrounding the developing embryo. How is it misused for sex determination?

13. Study the given diagram where A is an embryonic stage that gets transformed into B, which in turn gets implanted in the endometrium in human females. [CBSE 2020]

```
A  Transform into  B
```

a. Identify A, B and its parts C and D.
b. Write the name of cavity present in the stage B. e fate of C and D in the course of embryonic development in human.

14. Given below is the diagram of a human ovum surrounded by a few sperms. Study the diagram and answer the following questions: [CBSE 2019]

```
A  B  C  D  E
Ovum
```

a. Which one of the sperms would reach the ovum earlier?
b. Identify ‘D’ and ‘E’.
c. Mention what helps the entry of sperm into the ovum and write the changes occurring in the ovum during the process.
d. Name the specific region in the female reproductive system where the event represented in the diagram takes place.

15. Medically it is advised to all young mothers that breast feeding is the best for their newborn babies. Do you agree? Give reasons in support of your answer. [CBSE 2018]

16. State from where do the signals for parturition originate in human females. [CBSE 2017]
1. Given below are four aspects of Reproductive Health in Column A and their related information in Column B:

<table>
<thead>
<tr>
<th>S. No.</th>
<th>Terms used in Reproductive Health</th>
<th>S. No.</th>
<th>Significant information</th>
</tr>
</thead>
<tbody>
<tr>
<td>(A)</td>
<td>MTP</td>
<td>(i)</td>
<td>Analysing fetal cells from amniotic fluid of the foetus</td>
</tr>
<tr>
<td>(B)</td>
<td>Amniocentesis</td>
<td>(ii)</td>
<td>Legalised in 1971</td>
</tr>
<tr>
<td>(C)</td>
<td>Saheli</td>
<td>(iii)</td>
<td>Programme initiated in 1951</td>
</tr>
<tr>
<td>(D)</td>
<td>Family Planning</td>
<td>(iv)</td>
<td>Non-steroidal oral contraceptive</td>
</tr>
</tbody>
</table>

Select the correct match from the following options:

1. (A) - (iv), B - (ii), C - (iii), D - (i)
2. (A) - (ii), B - (i), C - (iv), D - (iii)
3. (A) - (i), B - (iii), C - (i), D - (iv)
4. (A) - (ii), B - (i), C - (iii), D - (iv)

2. Given below are Column A with a list of certain Assisted Reproductive Technologies (ART) and in Column B the procedures followed during ART:

<table>
<thead>
<tr>
<th>S.No.</th>
<th>Names of ART</th>
<th>S.No.</th>
<th>Procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td>(A)</td>
<td>GIFT</td>
<td>(i)</td>
<td>Transfer of ovum from a donor into the fallopian tube of another female.</td>
</tr>
<tr>
<td>(B)</td>
<td>ICSI</td>
<td>(ii)</td>
<td>Transfer of semen from the donor into the vagina of the female.</td>
</tr>
<tr>
<td>(C)</td>
<td>ZIFT</td>
<td>(iii)</td>
<td>Injecting sperms directly into the ovum.</td>
</tr>
<tr>
<td>(D)</td>
<td>IUI</td>
<td>(iv)</td>
<td>Transfer of early embryos into the fallopian tube.</td>
</tr>
</tbody>
</table>

Choose the option where ART correctly matches with the procedure.

1. (A) - (i), (B) - (ii), (C) - (iii), (D) - (iv)
2. (A) - (iv), (B) - (i), (C) - (ii), (D) - (iii)
3. (A) - (iv), (B) - (iii), (C) - (i), (D) - (ii)
4. (A) - (i), (B) - (iii), (C) - (iv), (D) - (ii)

3. Assertion (A): Through Reproductive and Child Health (RCH) programmes in India; we could bring down the population growth rate.

Reason (R): A rapid increase MMR and IMP were the reasons, along other reasons for this.

(1) Both Assertion and Reason are true and Reason is the correct explanation of Assertion.
(2) Both Assertion and Reason are true but Reason is not the correct explanation of Assertion.
(3) Assertion is true but Reason is false.
(4) Both Assertion and Reason are false.

4. **Assertion (A):** Sterilisation methods are generally advised for male/female partner method to prevent any more pregnancies.

   **Reason (R):** These techniques are less effective and have high reversibility.  
   
   (1) Both Assertion and Reason are true and Reason is the correct explanation of Assertion.
   (2) Both Assertion and Reason are true but Reason is not the correct explanation of Assertion.
   (3) Assertion is true but Reason is false.
   (4) Both Assertion and Reason are false.

5. Select the correct option for Human Chorionic Gonadotropin (hCG) released during embryonic development in humans.  
   
   (i) Helps in maintenance of pregnancy.
   (ii) Leads to rupture of Graafian follicle.
   (iii) Cause strong uterine contraction during childbirth.
   (iv) Brings metabolic changes in the mother.

   (1) (i) and (ii)  
   (2) (i) and (iv)  
   (3) (ii) and (iii)  
   (4) (ii) and (iv)

6. A specialized procedure to form an embryo in the laboratory in which sperm is directly, injected into the ovum is:  
   
   (1) IUT  
   (2) IUI  
   (3) ICSI  
   (4) ZIFT

7. Listed below are all reproductive tract infections except  
   
   (1) Genital herpes  
   (2) Filariasis  
   (3) Trichomoniasis  
   (4) Syphilis

8. **Assertion (A):** Determining the sex of an unborn child followed by MTP is an illegal practice.

   **Reason (R):** Amniocentesis is a practice to test the presence of genetic disorders also.

   (1) Both Assertion and Reason are true and Reason is the correct explanation of Assertion.
   (2) Both Assertion and Reason are true but Reason is not the correct explanation of Assertion.
   (3) Assertion is true but Reason is false.
   (4) Both Assertion and Reason are false.

9. Name and explain a surgical contraceptive method that can be adopted by the male partner of a couple.  

10. State the composition and principle of oral pills as a contraceptive measure taking the example of Saheli.  

11. (a) IUDs are said to be effective contraceptives. Name any two common write the mode of their actions.

    (b) When is sterilisation advised to married couples? How is it carried out in a human male and a female, respectively?
12. Explain one application of each one of the following:

(a) Amniocentesis
(b) Lactational amenorrhea
(c) ZIFT
(d) Prepare a poster for the school programme depicting the objectives of: “Reproductive and Child Health Care Programme”. [CBSE 2019]
CHAPTER 4
PRINCIPLES OF INHERITANCE AND VARIATION

PREVIOUS YEAR QUESTIONS

1. **Assertion (A)**: In Thalassemia an abnormal myoglobin chain is synthesized due to a gene defect.
   
   **Reason (R)**: Thalassemia is controlled by genes HBA1 and HBA2 on chromosome 16.  

   [CBSE 2023]

2. By using Punnett square depict the genotypes and phenotypes of test crosses (where green pod colour (G) is dominant over yellow pod colour (g) in Garden pea with unknown genotype.

   [CBSE 2023]

3. It is sometimes observed that the F₁ progeny has a phenotype that does not resemble either of the two parents and has intermediate phenotype. Explain by taking a suitable example and working out the cross upto F₂ progeny.

   [CBSE 2023]

4. "It is sometimes observed that the F₁ progeny shows a phenotype that resembles both the parents." Explain this type of inheritance using the example of A,B,O blood groups in human.

   [CBSE 2023]
5. The chromosome number is fixed for all normal organisms leading to species specification whereas any abnormality in the chromosome number of an organism results into abnormal individuals. For example, in humans 46 is the fixed number of chromosomes both in male and female. In male it is '44 + XY' and in female it is '44 + XX'. Thus the human male is heterogametic, in other words produce two different types of gametes one with '22 + X' chromosomes and the other with '22 + Y' chromosomes respectively. Human female, on the other hand is homogametic i.e. produces only one type of gamete with '22 + X' chromosomes only. Sometimes an error may occur during meiosis of cell cycle, where the sister chromatids fail to segregate called nondisjunction, leading to the production of abnormal gametes with altered chromosome number. On fertilisation such gametes develop into abnormal individuals.

(a) State what is aneuploidy.

(b) If during spermatogenesis, the chromatids of sex chromosomes fail to segregate during meiosis, write only the different types of gametes with altered chromosome number that could possibly be produced.

(c) A normal human sperm (22 + Y) fertilises an ovum with karyotype '22 + XX'. Name the disorder the offspring thus produced would suffer from and write any two symptoms of the disorder. [CBSE 2023]

OR

(c) Name a best known and most common autosomal aneuploid abnormality in human and write any two symptoms.

6. The case of Down's syndrome in humans is:

(1) Extra copy of an autosome
(2) Extra copy of a sex chromosome
(3) Absence of an autosome
(4) Absence of a sex chromosome

7. Which of the following features show the mechanism of sex determination in honey-bee? [CBSE Term-I 2022]

(1) An offspring formed from the union of a sperm and egg develops as a male.
(2) Males have half the number of chromosomes than that of female.
(3) The females are diploid having 32 chromosomes.
8. Select the pair that is incorrect: [CBSE Term-I 2022]
(1) Sickle-cell anaemia : Autosomal linked recessive
(2) Haemophilia : Autosomal linked recessive trait
(3) Colour blindness : Sex linked recessive trait
(4) Thalassemia : Autosomal linked recessive trait

9. An example of a human trait where a single gene can exhibit multiple phenotypic expression is :- [CBSE Term-I 2022]
(1) Phenylketonuria
(2) Cystic fibrosis
(3) Thalassemia
(4) Haemophilia

10. Life cycle of *Drosophila melanogaster* is completed in :- [CBSE Term-I 2022]
(1) 7 days
(2) 14 days
(3) 21 days
(4) 28 days

11. How many types of gametes would develop by an organism with genotype AaBBCcDD? [CBSE Term-I 2022]
(1) 1
(2) 2
(3) 3
(4) 4
12. In Pisum sativum the flower colour may be Violet (V) or White (v). What is the offsprings in a cross of VV × vv would be expected to be violet? [CBSE Term-I 2022]

(1) 25%  (2) 50%  (3) 75%  (4) 100%

13. Which one of the gene pair is expected to give a ratio of 1 : 1 : 1 : 1 in the progeny of a Mendelian Dihybrid cross? [CBSE Term-I 2022]

(1) AaBb × AbBb  
(2) AABB × AaBb  
(3) AaBb × aabb  
(4) AABB × aabb

14. The progeny of a cross between two snapdragon plants heterozygous for flower colour, bearing different coloured flower would be: [CBSE Term-I 2022]

(1) 50% pink, 50% white  
(2) 25% red, 50% pink, 25% white  
(3) 50% red, 50% white  
(4) 75% red, 25% white

15. Study the given pedigree of a family and select the trait that shows this pattern of inheritance [CBSE Term-I 2022]

(1) Autosomal recessive, Phenylketonuria  
(2) Sex-linked recessive, Colour blindness  
(3) Autosomal dominant, Myotonic dystrophy  
(4) Sex-linked dominant, Vitamin D resistant rickets

<table>

19. How many types of gametes can be produced in a diploid organism which is heterozygous for 4 loci? [CBSE Term-I 2022]
   (1) 4 (2) 8 (3) 16 (4) 32

20. The recombinant Frequency between the four linked genes is as follows:
   (i) between X and Y is 40%.
   (ii) between Y and Z is 30%.
   (iii) between Z and W is 10%.
   (iv) between W and X is 20%.

Select the option that shows the correct order of the position of W, X, Y and Z genes on the chromosome: [CBSE Term-I 2022]

21. A snapdragon plant with violet flowers was crossed with another such plant with white flowers. The F₁ progeny obtained had pink flowers. Explain, in brief, the inheritance pattern seen in offsprings of F₁ generation? [CBSE IMP Question]

22. Karyotype of a child shows trisomy of chromosome number 21. Identify the disorder and state the symptoms which are likely to be exhibited in this case. [CBSE IMP Question]

23. How would you find out the genotype of a pea plant with violet flowers? With the help of Punnett’s square showing crosses. [CBSE IMP Question]
24. What is aneuploidy? Name a chromosomal disorder in humans caused due to (a) gain of an autosome, and (b) loss of a sex chromosome in females. [CBSE 2020]

25. A normal couple has their first child, who is haemophilic. Work out a cross to show how it is possible. State the possibility of the normal and the haemophilic children, along with their sexes, that can be born to them. [CBSE 2020]

27. Write one example each of organisms exhibiting (i) male heterogamety, and (ii) female heterogamety. [CBSE 2019]

28. Why is the frequency of red-green colour blindness more in human males than in females? Explain. [CBSE 2019]

29. How is polygenic inheritance different from pleiotropy? Give one example of each. [CBSE 2019]

30. Write the sex of a human having XXY chromosomes with 22 pairs of autosomes. Name the disorder this human suffers from. [CBSE 2018]
1. Given below is the restriction site of a restriction endonuclease Pst-I and the cleavage sites on a DNA molecule.

\[
5' \text{C–T–G–C–A–G} \ 3'
\]
\[
3' \text{G–A–C–G–T–C} \ 5'
\]

Choose the option that gives the correct resultant fragments by the action of the enzyme Pst-I.

1. \(5' \text{C–T–G–C–A–G} \ 3'
\)
   \(3' \text{G–A–C–G–T–C} \ 5'
\)
2. \(5' \text{C–T–G–C–A–G} \ 3'
\)
   \(3' \text{G–A–C–G–T–C} \ 5'
\)
3. \(5' \text{C–T–G–C–A–G} \ 3'
\)
   \(3' \text{G–A–C–G–T–C} \ 5'
\)
4. \(5' \text{C–T–G–C–A–G} \ 3'
\)
   \(3' \text{G–A–C–G–T–C} \ 5'
\)

2. Given below is a sequence of bases in mRNA of a bacterial cell. Identify the amino acid that would be incorporated at codon position 3 and codon position 5 during the process of its translation.

\[
3' \text{AUCAGGUUGUGAUGGUACGA} \ 5'
\]

1. Phenylalanine, Methionine
2. Cysteine, Glycine
3. Alanine, Proline
4. Serine, Valine

3. Human Genome Project (HGP) was a mega project launched in the year 1990 with some important goals.

(a) Enlist any four prime goals of HGP.

(b) Name any one common non-human animal model organism which has also been sequenced thereafter.

4. (a) (i) How and why is charging of tRNA essential in the process of transition
(ii) State the function of ribosome as a catalyst in bacteria during the process of translation.

(iii) Explain the process of binding of ribosomal units to mRNA during protein synthesis.

[CBSE 2023]

OR

(b) (i) Describe the dihybrid cross upto F₂ generation as conducted by Gregor Mendel using pure lines of Garden Pea for characters seed shape and seed colour. [CBSE 2023]
5. (a) Name and describe the steps involved in the technique widely used in forensics that serves as the basis of paternity testing in case of disputes.  [CBSE 2023]

6. (i) Explain the process of aminoacylation of tRNA and its role in the process of translation.
(ii) How does initiation of the translation process occur in prokarotes? Explain.
(iii) Where are the untraslated regions located on mRNA and why? [CBSE 2023]

7. Given below are the observation drawn in HGP. Select the options that shows the correct observations.  [CBSE Term – I 2022]
   (i) The human genome contains 3164.7 billion base pairs.
   (ii) The average gene consists of 3000 bases.
   (iii) Less than 2% of the genome codes for proteins.
   (iv) Chromosome one has most genes (2698)
   (1) (i) and (ii)  (2) (ii) and (iii)  (3) (iii) and (iv)  (4) (i) and (iii)

8. The phosphoester linkage in the formation of a nucleotide involves the bonding [CBSE Term – I 2022]
   (1) Phosphate group and OH of 3\(^\circ\)C of a nucleoside
   (2) Phosphate group and OH of 5\(^\circ\)C of a nucleoside
   (3) Phosphate group and H of 3\(^\circ\)C of a nucleoside
   (4) Phosphate group and H of 5\(^\circ\)C of a nucleoside

9. The switching 'on' and 'off' of the lac operon in prokaryotes is regulated by [CBSE Term – I 2022]
   (1) Glucose  (2) Galactose  (3) Lactose  (4) Fructose

10. For 'in-vitro' DNA replication, which one of the following substrates need to be added along with the necessary enzymes the DNA template and specific conditions? [CBSE Term – I 2022]
    (1) Ribonucleotide triphosphate  (2) Deoxyribonucleoside triphosphate
    (3) Deoxyribonucleotide triphosphate  (4) Ribonucleoside triphosphate

11. Which one of the following factor will associate transiently with RNA polymerase to terminate transcription in prokaryotes? [CBSE Term – I 2022]
    (1) sigma factor  (2) RHO factor  (3) delta factor  (4) theta factor

12. Choose the correct pair of codon with its corresponding amino acid from the following list: [CBSE Term – I 2022]
    (1) UAG : Glycine  (2) AUG : Arginine  (3) UUU : Phenylalanine  (4) UGA : Methionine
13. During elongation process of translation, the peptide bond formation between amino acids is catalysed:-

(1) ribosomal RNA  (2) protein in small subunit of ribosome
(3) protein in large subunit of ribosome  (4) transfer RNA

[CBSE Term – I 2022]

14. A region of coding strand of DNA has the following nucleotide sequence:

5′–TGCGCCA – 3′

The sequence of bases on mRNA transcribed by this DNA stand would be:

(1) 3′ – ACGCGGT – 5′  (2) 5′ – ACGCGGT – 3′
(3) 5′ – UGCGCCA – 3′  (4) 3′ – UGCGCCA – 5′

[CBSE Term – I 2022]

15. A DNA molecule is 160 base pairs long. It has 20% adenine. How many cytosine bases are present in this DNA molecule?

(1) 192  (2) 96  (3) 64  (4) 42

[CBSE Term – I 2022]
16. A templated strand in a bacterial DNA has the following base sequence:

5\(^{-}\) – TTTAACGAGG – 3\(^{-}\) 

(1) 5\(^{-}\) – AAATTGCTCC – 3\(^{-}\)  
(2) 3\(^{-}\) – AATTGCTCC – 5\(^{-}\)  
(3) 3\(^{-}\) – AAAUUGCUCC – 5\(^{-}\)  
(4) 5\(^{-}\) – CCUCGUAANAA – 5\(^{-}\) 

[CBSE Term – I 2022]

17. tRNA has an __________ that has bases complementary to the codon. Its actual structure is a compact molecule which looks like _______.

Select the option that has correct choices for the two 'blanks':

(1) amino acid acceptor end, clover-leaf  
(2) anticodon loop, clover-leaf  
(3) amino acid acceptor end, inverted L  
(4) anticodon loop, inverted L 

[CBSE Term – I 2022]

18. Which type of RNA is correctly paired with its function? 

(1) small nuclear RNA Processes rRNA  
(2) transfer RNA : attaches to amino acid  
(3) ribosomal RNA : involved in transcription  
(4) micro RNA : involved in translation 

[CBSE Term – I 2022]

19. The figure given below has labellings (i), (ii) and (iii), which two labellings in the given figure are components of a nucleosome? Select the correct option.

[CBSE Term – I 2022]

![Diagram](image_url)

(1) (i) – HI histone, (ii) – DNA  
(2) (i) – DNA, (ii) – Histone Octamer  
(3) (ii) – DNA, (iii) – HI Histone  
(4) (ii) – Histone octamer, (ii) – DNA 

[CBSE Term – I 2022]

20. In molecular biology who proposed that genetic information flows in one direction?

(1) Har gobind Khorana  
(2) Francis Crick  
(3) Watson and Crick  
(4) Marshall Nirenberg

[CBSE Term – I 2022]

21. Predict the effect if, the codon UAU coding for an amino acid at the 25\(^{th}\) position of a polypeptide of 50 amino acids, is mutated to UAA.  

[CBSE IMP. Question]

22. Assertion (A) : Primary transcripts in eukaryotes are nonfunctional.  

Reason (R) : Methyl guanosine triphosphate is attached to 5\(^{th}\) end of hnRNA.

(1) Both assertion and reason are true, and reason is the correct explanation of assertion.  
(2) Both assertion and reason are true, but reason is not the correct explanation of assertion.
(3) Assertion is true but reason is false.
(4) Both assertion and reason are false.

OR

**Assertion (A):** An organism with lethal mutation may not even develop beyond the zygote stage.

**Reason (R):** All types of gene mutations are lethal.

(1) Both assertion and reason are true, and the reason is the correct explanation of the assertion.
(2) Both assertion and reason are true, but the reason is not the correct explanation of the assertion.
(3) Assertion is true but reason is false.
(4) Both assertion and reason are false.

23. Evaluate the suitability of DNA and RNA as genetic material and justify the suitability of the one that is preferred as an ideal genetic material.

OR

Explain the mechanism of DNA replication as suggested by Watson and Crick.

24. Give below is one the strands of a DNA segment:

```
3' TACGTACGTACGTACG 5'
```

(a) Write its complementary strand
(b) Write a Possible RNA strands that can be transcribed from the above DNA molecule formed.

25. Explain the role of regulatory gene in a lac operon. Why is regulation of lac operon called as negative regulation?

26. Compare the processes of DNA replication and transcription in prokaryotes.

27. (a) Explain Griffith’s ‘transforming principle’ experiment.

(b) In the above experiment, “heat which killed one type of bacteria, did not destroy the properties of genetic material.” Justify.

28. What is an operon? Explain the functioning of lac operon when in an open state.

29. (a) Hershey and Chase carried their experiment in three steps: infection, blending, centrifugation. Explain each step.

(b) Write the conclusion and interpretation of the result they obtained.
PREVIOUS YEAR QUESTIONS

1. At which stage during evolution did human use hides to protect their bodies and buried their dead? [CBSE-2023]
   (1) Homo habilis   (2) Neanderthal man   (3) Java man   (4) Homo erectus

2. Mention Darwin's observations made on finches during his visit to Galapagos Islands. Write the explanation given by Darwin on his observations. [CBSE 2023]

3. Industrial melanism in England after 1850 is an excellent example of Natural selection. Explain how? [CBSE 2023]

4. How would the gene flow or genetic drift affect the population in which either of them happen to take place? [CBSE 2019]

5. According to Darwinian theory of natural selection the rate of appearance of new forms is linked to the life-cycle or the life-span of an organism. Explain with the help of an example. [CBSE 2019]

6. Describe S.L. Miller's experiment. Comment on the observations he made and his contribution towards the origin of life on Earth. [CBSE 2019]

7. "Appearance of melanized moths post-industrialization in England is a classic example of evolution by natural selection." Explain. [CBSE 2019]

8. According to the Hardy-Weinberg principle, the allele frequency of a population remains constant. How do you interpret the change of frequency of alleles in a population? [CBSE 2019] (a) How does the Hardy-Weinberg equation explain genetic equilibrium? (b) Describe how this equilibrium is disturbed that may lead to founder effect. [CBSE 2019]

9. Charles Darwin during his famous sea voyage around the world in a ship (HMS Beagle), concluded that there has been gradual evolution of life. Answer the following questions: (a) What is his theory known as? Explain the silent features of his theory. (b) Name a scientist who arrived at a similar conclusion as that of Charles Darwin. [CBSE 2019]

10. Write the names of the following: (a) A 15 mya primate that was ape-like (b) A 2 mya primate that lived in East African grasslands [CBSE 2018]

11. With the help of an algebraic equation, how did Hardy-Weinberg explain that in a given population the frequency of occurrence of alleles of a gene is supposed to remain the same through generations? [CBSE 2018]
12. (a) Differentiate between analogous and homologous structures.
(b) Select and write analogous structures from the list given below:
   (i) Wings of butterfly and birds
   (ii) Vertebrate hearts
   (iii) Tendrils of bougainvillea and cucurbita
   (iv) Tubers of sweet potato and potato  [CBSE 2018]

13. State two postulates of Oparin and Haldane with reference to origin of life.  [CBSE 2017]

14. Write the characteristics of Ramapithecus, Dryopithecus and Neanderthal man. [CBSE 2017]
PREVIOUS YEAR QUESTIONS

1. Tetanus antitoxin (Tetanus toxoid) when injected into the human body it immediately provides:
   (a) Innate immunity   (b) Passive immunity
   (c) Auto immunity     (d) Active immunity  

2. Select the pathogen mismatched with the symptoms of disease caused by it from the list given below:  
   (a) Entamoeba histolytica: Constipation, abdominal pain.
   (b) Epidermophyton: Dry scaly lesions on nail.
   (c) Wuchereria bancrofti: Chronic inflammation of lymphatic vessels of lower limb.
   (d) Haemophilus influenzae: Blockage of the intestinal passage.

3. Interferons are proteins. In humans they are secreted by:
   (a) Thymus gland       (b) B-lymphocytes
   (c) Viral infected cells (d) Tonsils

4. The decrease in the T-lymphocytes count in human blood will result in:
   (a) Decrease in antigens (b) Decrease in antibodies
   (c) Increase in antibodies (d) Increase in antigens

5. Immunotherapy these days is one of the most efficient way of treatment of cancer. The therapy involved activates the immune system and destroys the tumour.
   (i) Write an example of one such biological response modifier used in immunotherapy.
   (ii) Why do patients need such substances if immune system is already working in body?
   (iii) State what is 'Contact inhibition'.

5. "Plasmodium protozoan needs both a mosquito and human host for its continuity. "Explain.

   OR

(b) We all must work towards maintaining good health because 'health is wealth' Enlist any six ways of achieving good health.  

[CBSE 2023]
6. When a microorganism invades a host, a definite sequence of events usually occur leading to infection and disease, causing suffering to the host. This process is called pathogenesis. Once a microorganism overcomes the defense system of the host, development of the disease follows a certain sequence of events as shown in the graph. Study the graph given below for the sequence of events leading to appearance of a disease and answer the questions that follow:

(a) In which period, according to the graph there are maximum chances of a person transmitting a disease/infection and why?

(b) Study the graph and write what is an incubation period. Name a sexually transmitted disease that can be easily transmitted during this period. Name the specific type of lymphocytes that are attacked by the pathogen of this disease. [CBSE 2023]

OR

(b) Draw a schematic labelled diagram of an antibody.

(c) In which period, the number of immune cells forming antibodies will be the highest in a person suffering from pneumonia? Name the immune cells that produce antibodies. [CBSE 2023]

8. Why a malignant tumour considered to be more damaging than a benign tumour? Explain. [CBSE 2023]

9. A boy developed some allergic reactions when he straight entered into his air conditioned room after a game of football outside his house. Write any two symptoms that could be noticed in such condition. How does our body combat such conditions? [CBSE Term – II 2022]

10. (a) (i) Write the Scientific name of the plant from where natural cannabinoids are obtained.
    (ii) Mention the parts of the plant that are used for extracting the drug. [3] (iii) How does the drug affect human body?

OR

(b) Epithelial lining of our intestine is considered as secondary lymphoid organ. Justify the statement. [CBSE Term – II 2022]

11. (a) Write the complete name of the diagnostic test for AIDS. Explain the principle it works on. (b) Name the type of genetic material present in AIDS causing pathogen.
A patient complains of suffering from constipation, stomach ache, stool with blood clots and excess mucous. The physician diagnosed it as amoebiasis, after stool test.

(a) Write the scientific name of the microbe identified in the stool sample.
(b) How do you think, the patient must have contracted it?
(c) Write your suggestions to the patient to avoid infection in future.

12. Identify and name the disease in which the patient’s cells lose the property of contact inhibition. State its possible causes and explain any three methods to accurately detect the pathological and physiological changes that take place due to the disease in living tissues.

OR
A patient had tested positive to ELISA Test. Identify the disease and the pathogen responsible, give reasons for the reduced/weak immunity of the patient and trace the path, spread and effects of this pathogen in the human body.

OR
It is often observed that the chances of a person suffering from measles in his or her lifetime are low, if he or she has suffered from the disease in their early childhood. Justify the statement.

14. A student on a field trip suddenly felt breathlessness and started to sneeze very badly. Nature this response and explain what it is due to.

15. Mention one application for each of the following:
(a) Passive immunization
(b) Antihistamine
(c) Colostrum
(d) Cytokinin-barrier

16. Name a human disease, its causal organism, symptoms (any three) and vector, spread by intake of water and food contaminated by human faecal matter.

17. Explain the relationship between B-lymphocytes and T-lymphocytes in developing an immune response.
CHAPTER 8
MICROBES IN HUMAN WELFARE

PREVIOUS YEAR QUESTIONS

1. Given below are the list of the commercially important products and their source organisms. Select the option that gives the correct matches. [CBSE 2023]

<table>
<thead>
<tr>
<th>S. No.</th>
<th>Bioactive Products</th>
<th>S. No.</th>
<th>Source Organism</th>
</tr>
</thead>
<tbody>
<tr>
<td>(A)</td>
<td>Cyclosporin A</td>
<td>(i)</td>
<td>Streptococcus</td>
</tr>
<tr>
<td>(B)</td>
<td>Statins</td>
<td>(ii)</td>
<td>Tricoderma polysporum</td>
</tr>
<tr>
<td>(C)</td>
<td>Streptokinase</td>
<td>(iii)</td>
<td>Penicillium notatum</td>
</tr>
<tr>
<td>(D)</td>
<td>Penicillin</td>
<td>(iv)</td>
<td>Monascus Purpureus</td>
</tr>
</tbody>
</table>

Options :
(a) (A)-(i) (B)-(ii), (C)-(iii), (D)-(iv)  
(b) (A)-(iii) (B)-(iv), (C)-(ii), (D)-(i)  
(c) (A)-(iv) (B)-(iii), (C)-(ii), (D)-(i)  
(d) (A)-(ii) (B)-(iv), (C)-(i), (D)-(iii)

2. Certain specific bacterial spores are mixed in water and sprayed over Brassica crop to control butterfly caterpillars. [CBSE 2023]
Name this bacterium and its mode of action on the butterfly caterpillars.

3. (a) (i) Give an example of a genus of fungi that forms mycorrhizal association with plants. (ii) How does the plant derive benefits from this association? [CBSE 2023]

4. On spraying Bacillus thuringiensis on an infected cotton crop field the pests are killed by the toxin, however the toxin although produced by the bacteria does not affect it. Explain giving reason? [CBSE 2023]

5. Farmers are often suggested to use the following organisms in their crop land so as to improve the soil fertility. Explain. [CBSE Term – II 2022]

6. Organic farmer use Trichoderma and Baculovirus as biological control age [CBSE Term – II 2022]
Explain four advantages of mycorrhizal association to plants. [CBSE IMP Question]

7. A farmer noticed that nematode infection in tobacco plants has resulted in the reduction in the yield. Suggest a strategy which provides cellular defense for providing resistance to this pest. Explain the technique. [CBSE IMP Question]

8. Name the genus of baculovirus that acts as a biological control agent in spite of being a pathogen. Justify by giving three reasons that make it an excellent candidate for the Job. [CBSE 2020]

9. What are ‘flocs’, formed during secondary treatment of sewage?
10. Write any two places where methanogens can be found. [CBSE 2019]

11. Briefly describe the process of secondary treatment given to municipal waste water (sewage) before it can be released into fresh water bodies. Mention another benefit provided by this process. [CBSE 2019]

13. Baculoviruses are good example of biocontrol agents. Justify giving three reasons. [CBSE 2018]

14(a) Organic farmers prefer biological control of diseases and pests to the use of chemicals for the same purpose. Justify.

(b) Give an example of a bacterium, a fungus and an insect that are used as biocontrol agents. [CBSE 2018]

14. Secondary treatment of the sewage is also called Biological treatment. Justify this statement and explain the process. [CBSE 2017]

15. How does the application of the fungal genus, Glomus, to the agricultural farm increase the farm output? [CBSE 2017]

16. Describe how do ‘flocs’ and ‘activated sludge’ help in Sewage Treatment. [CBSE 2017]

17. List the events that reduce the Biological Oxygen Demand (BOD) of a primary effluent during sewage treatment. [CBSE 2017]
